

- what you are most proud of about the project as well as what you could have done better with more time

Overall I am really proud of how the styling turned out. I looked at a couple of inspiration websites but for the most part the styling is stuff that I came up with on my own. I think it gives the website a unique feel and helps it stand out from the rest.

- changes made to project in response to feedback provided by three critiques

The changes were mostly to the about-us and contact-us page. Added more content to the about-us page via adding the company's benefits towards their employees.

Also added more content to the contact-us page because it felt like a dark room.

The nav-bar position was set to fixed so that it would stay at the top of the page whenever the user would scroll.

- resources/assets and what they were used for (frameworks, libraries, code snippets, plugins, templates, etc)

Bootstrap - Icons

- justification of some of the key design decisions

The nav-bar definitely needed to be fixed. It made the over-all experience of the web page feel more professional.

- ways that you customized the framework design

Adding in hover-styles to different elements made the website come to life. Before it was a little dull, but this makes the site more interactive with the user.

- advanced features that you incorporated into the project

Simple features- that made the site look advanced that could often be overlooked were things like box shadow, border colors, the fixed nav, setting variables in the scss files to ensure each color was the same throughout the website. Making the mobile and tablet view fit the screen and look nicely was definitely something that is needed and I would say advanced. It was chosen that because the nav would fill up most of the

screen on the tablet/mobile view, that it would be a relative position instead of fixed.

- **problems that you experienced along the way**

Overall most the problems were just trial/error with styling. Sometimes every now and then I would know what I wanted to do but forget the syntax for the code, however that was not often.
